

Servo Tutorial

- Set up the longer wires first, using the three short cables to join the Servo to the Raspberry Pi pins
- Run `python ./servo.py`
- Get together with your colleague to include the second servo as shown by the shorter lines
- Run `python ./servobot.py` and `python pibot.py`
- Now see what you can do together!

There may be spare servos and cables after the tutorials at £5. You can get your own via ebay: for servos, search for “feetech fs90r 360 degree continuous rotation robot servo wheel”; for extension cables, search for “dupont cable”.
